

AFTERCARE FOR TATTOOS

- Leave the covering on for 1-2 hours.
- Remove the covering and clean with a mild antibacterial soap and warm water, leave to air-dry or using a paper towel to gently pat dry.
- Apply a thin layer of Bepanthen. Do NOT use Vaseline or a regular moisturiser. This can damage the tattoo.
- Clean twice daily until fully healed, using a mild antibacterial soap followed by a thin layer of Bepanthen.
- Keep the tattoo well moisturised until it has fully healed and all scabs have fallen away. This usually takes an average of 2 weeks.
- Do NOT pick/scratch the tattoo or the scabs as this will result in loss of colour. If the tattoo becomes dry/itchy, apply Bepanthen more frequently.
- Do NOT go swimming or sunbathing for at least 2 weeks and until the tattoo has fully healed. Once healed, DO wear a higher factor sun lotion over the tattoo.

This information is designed to help you heal and care for your piercing(s). Please note that each body is unique and may react differently to specific treatments. If further assistance is required, either come in and see us or contact your tattooist using the contact details below.
